

The background of the image is a soft-focus, monochromatic landscape. It features a prominent, dark, craggy rock formation or cliff face on the left side. Several tall, thin pine trees are scattered across the rock face and its base. In the upper right area, there's a cluster of trees and a small, dark, rectangular stone structure, possibly a ruin or a fortification, perched on the edge of the cliff. The overall atmosphere is hazy and ethereal, with a thick mist or fog filling the lower half of the frame.

## CONNECTING WITH EXCEL

Open a new Excel file.

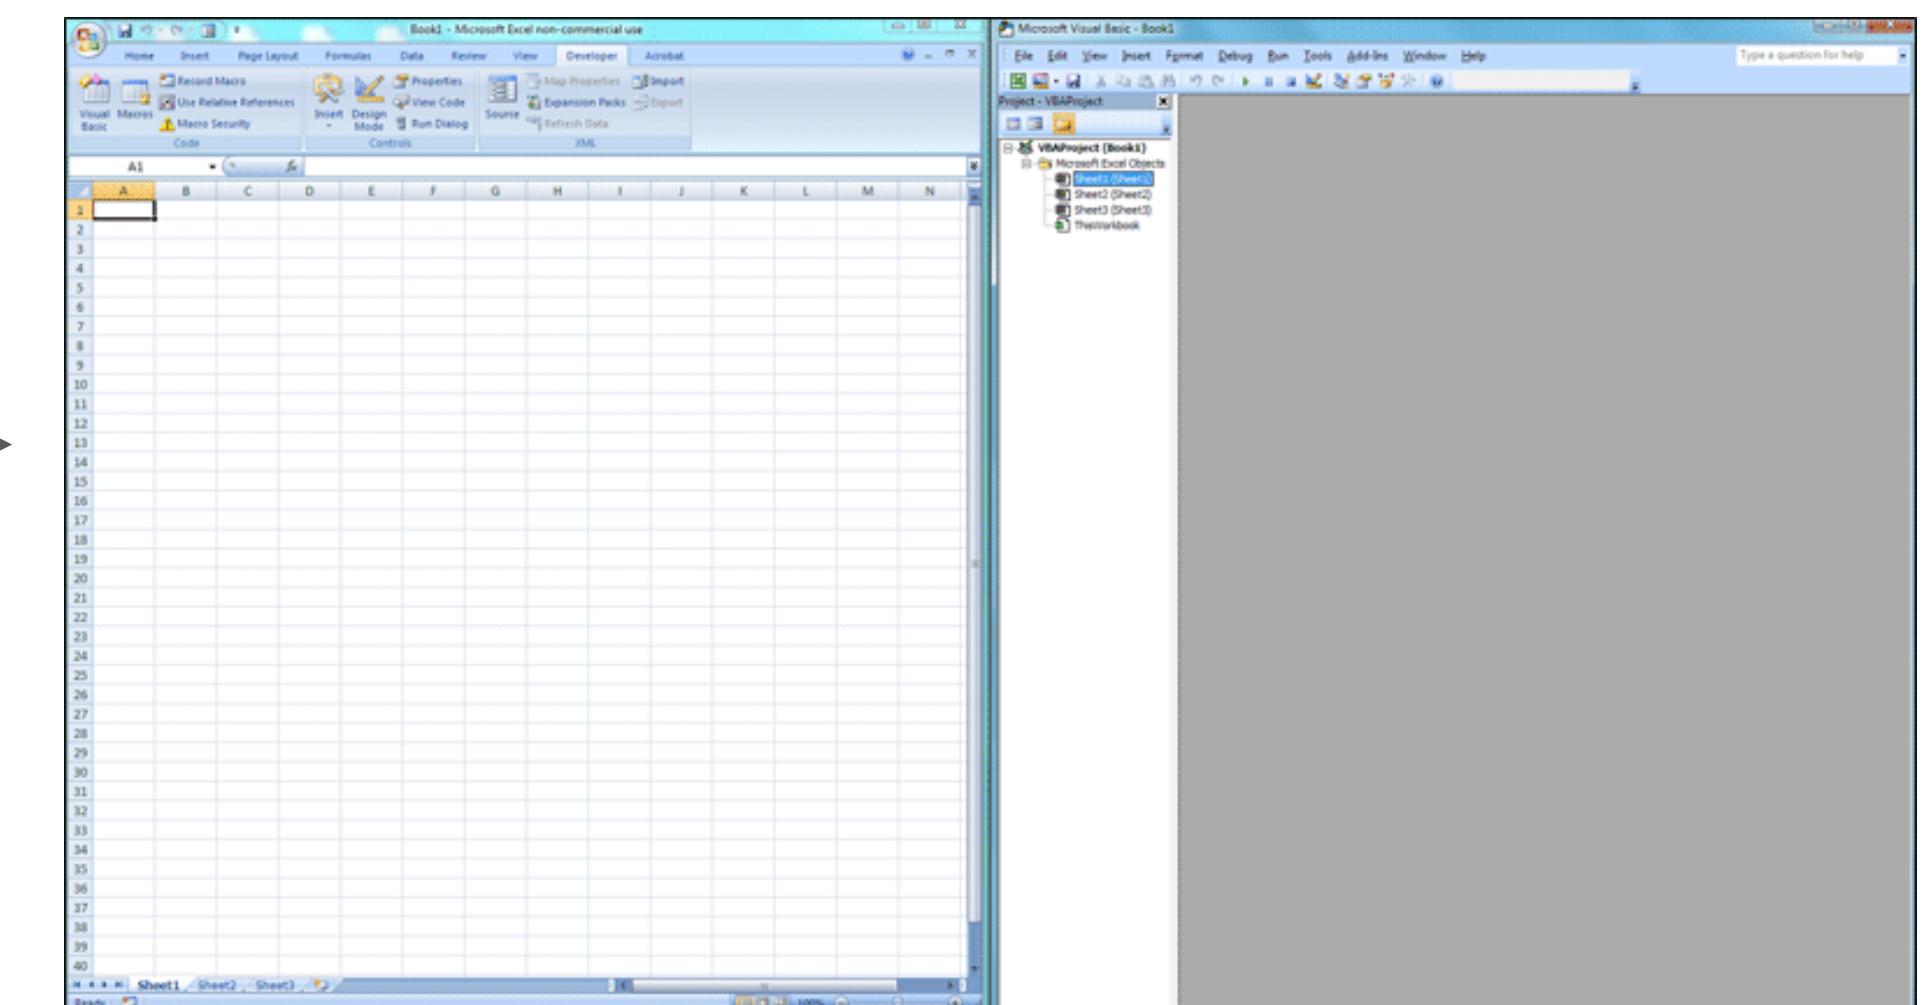

Save it as 'Excel Macro-Enabled Workbook':

Lecture3.xlsxm

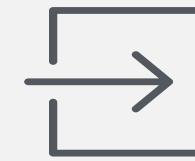

To make work easier, let's start by placing the worksheet and the VBA Editor window next to each other.

On Windows, this is easiest done by pressing the Win-key and the right-left arrows, respectively.

On Mac, this has to be done manually.

E X C E L

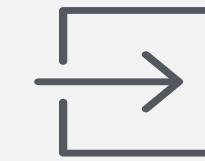

VBA allows us to interact directly with Excel.

Let's start by writing some text in cell "**C3**".

```
Sub MyCode1()
    ActiveCell.Value = "Brian"
End Sub
```

E X C E L

Next, let's assign Brian a grade of **80** marks in his final exam:

Did he pass his exam?

☒ VBA can help us find out.

Here is the code:

	A	B	C
1			
2			Exam result
3		Brian	80
4			
5			

### Sub MyCode2()

```
If ActiveCell.Value > 50 Then  
    MsgBox ("Pass")  
Else  
    MsgBox ("Fail")
```

### End Sub

E X C E L

Can we make this a little more professional?

*(Nobody likes message boxes...)*

### Sub MyCode2()

```
If ActiveCell.Value > 50 Then  
    ActiveCell.Value = "Pass"  
Else  
    ActiveCell.Value = "Fail"  
End If
```

### End Sub

But: Is this solution OK? Not really.

*Brian's grade gets overwritten by the text results. That can't be right.*

E X C E L

... and even more professional ...

By using the:

**Offset(Rows, Columns)**

function.

**Sub MyCode2()**

```
If ActiveCell.Value > 50 Then  
    ActiveCell.Offset(0, 1).Value = "Pass"  
Else  
    ActiveCell.Offset(0, 1).Value = "Fail"  
End If
```

**End Sub**

It's much better now.

*Brian's exam result is written down just next to his grade.*

## THE DOT NOTATION

Understanding object-oriented programming

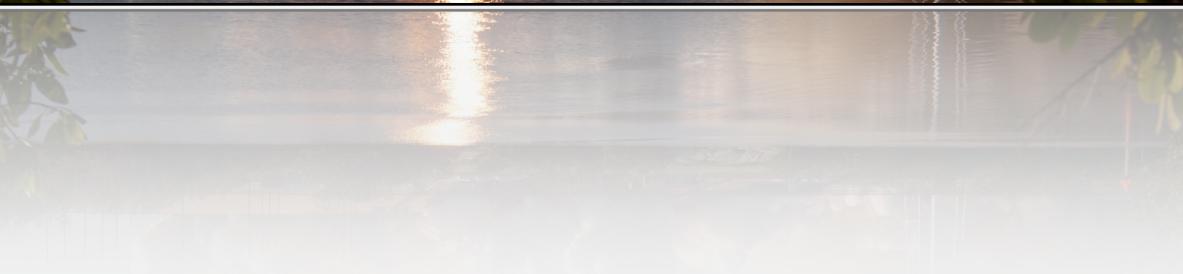

O B J E C T S

9

## WHAT IS AN OBJECT?

(in real life)

ALL OBJECTS HAVE:

- FEATURES (**PROPERTIES**)

*Examples:*

- The rocket's height is 50m.
- The rocket's colour is white.
- The student's exam grade is 80.
- The classroom's capacity is 100 chairs.
- The air temperature in Singapore today is 28C.
- The water temperature is 23C.

- METHODS (**PROCEDURES/ROUTINES**)

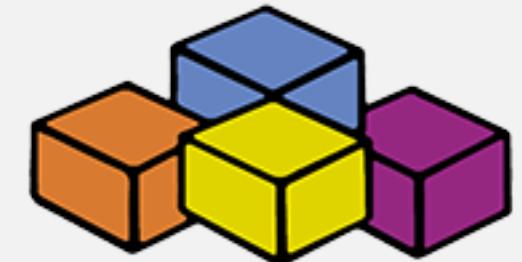

*Examples:*

- Rocket - start engine!
- Rocket - stop engine!
- Student - wake up!
- Student - enter classroom!
- Singapore - start rain!
- Singapore - stop rain!

O B J E C T S

VISUAL BASIC IS AN  
OBJECT-ORIENTED  
PROGRAMMING  
LANGUAGE

Microsoft®  
**VisualBasic®**  
for Applications

Excel

(which makes our life **very** easy)

We access *Properties* and *Methods* of an object using the “dot” notation:

Changing the value of the current active cell to “Brian”

**ActiveCell.Value = "Brian"**

Accessing a cell that is neighbouring the current one:

**ActiveCell.Offset(0, 1)**

Adding a comment, copying or deleting the current active cell:

**ActiveCell.AddComment**  
**ActiveCell.Copy**  
**ActiveCell.Delete**

O B J E C T S

11

HOW CAN WE POSSIBLY KNOW  
AND NAVIGATE ALL THE  
PROPERTIES AND METHODS OF  
AN OBJECT?

Good news:

Visual Basic Editors offers Autocompletion of object properties and methods.

ActiveCell.

- Activate
- AddComment
- AddIndent
- AddRef
- Address
- AddressLocal
- AdvancedFilter

O B J E C T S

Useful icons and colour coding.

### PROPERTIES

### METHODS

### ActiveCell.

- Font
- FormatConditions
- Formula
- FormulaArray
- FormulaHidden
- FormulaLocal
- FormulaR1C1

### ActiveCell.

- Clear
- ClearComments
- ClearContents
- ClearFormats
- ClearHyperlinks
- ClearNotes
- ClearOutline

O B J E C T S

WHAT IF WE WANT  
EVEN MORE HELP?

Good news:

Visual Basic Editor offers Suggestive typing.

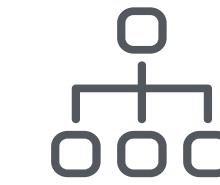

ActiveCell.Offset(

Offset([RowOffset], [ColumnOffset]) As Range

ActiveCell.AddComment(

AddComment([Text]) As Comment

## BRINGING IT ALL TOGETHER

# COMPUTER THINKING

A N D P R O G R A M M I N G

## CONDITIONAL STATEMENTS (IF-THEN-ELSE)

Most of our thoughts are decisions! Similarly, most of the operations that we ask the computer to do for us are conditional statements.

## REPEATED ITERATIONS (FOR)

The primary reason to use a computer at all is because it can perform repetitive tasks.

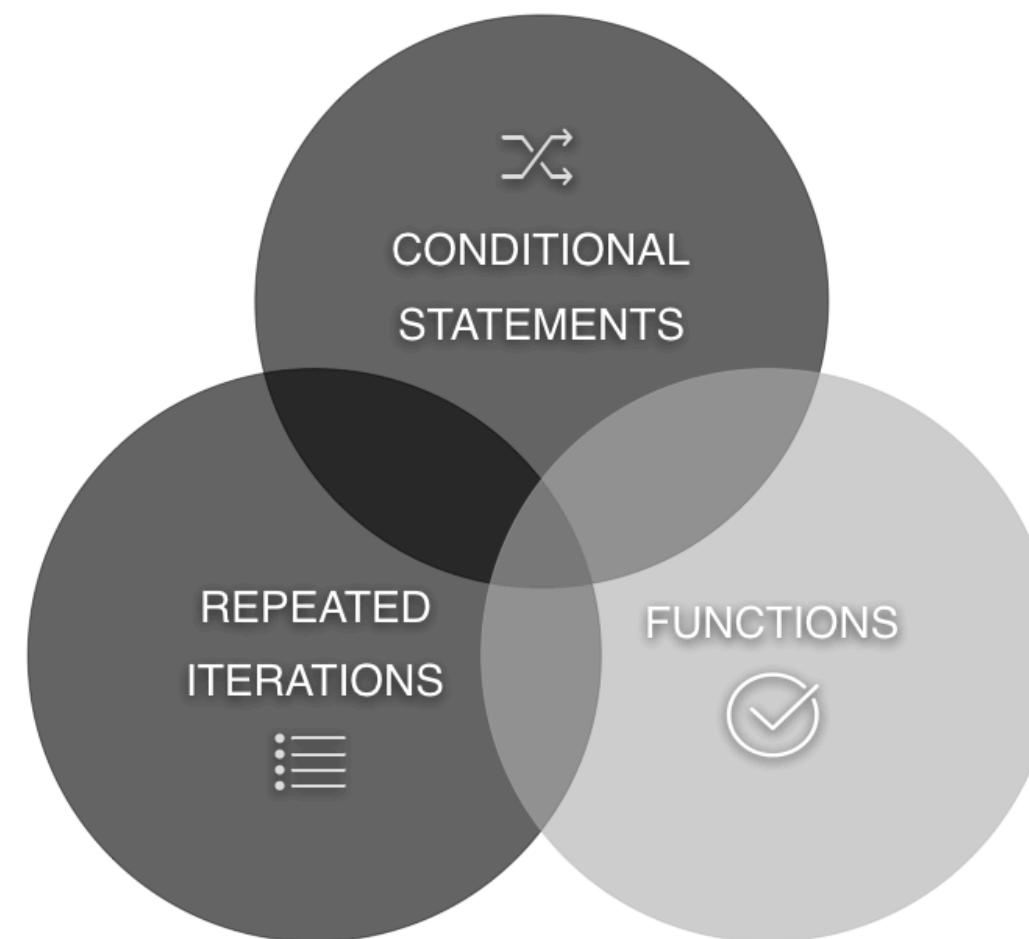

## FUNCTIONS

The reason why we write functions is to be able to apply the same operations to many different objects.

Designing applications

P L A Y G R O U N D

1

## The Range object

The most frequently used Visual Basic object is **Range**.

It allows us to automatically select a range of cells for which we may want to change a property (e.g. the font size or the colour), or which we may want to change in some way (e.g. to copy-paste or delete).

```
Sub MyCode3()
```

```
    Range("A1:A3").Value = 2019  
    Range("A1:A3").Font.Name = "Times New Roman"  
    Range("A1:A3").Font.Size = 30  
    Range("A1:A3").Interior.Color = vbWhite
```

```
End Sub
```

P L A Y G R O U N D

2

## The Worksheets object

The Worksheets object allows us to work with the entire worksheet, change its name, print it out, or adjust its features in any way that is necessary.

**Sub MyCode4()**

```
Worksheets(1).Name = "Data"  
Worksheets(1).Cells.Interior.Color = vbWhite
```

**End Sub**

P L A Y G R O U N D

3

## The Applications object

The Applications object is the most comprehensive. It is a container for the entire Excel application running on our machine. We can interact with it in a number of ways, e.g. by opening a new workbook, saving the current one, or closing Excel altogether.

```
Sub MyCode5()
```

```
    Application.Quit
```

```
End Sub
```

# HOMEWORK

## ⟩ WORKING WITH OBJECTS IN VBA

Before we turn to a more extensive discussion of objects during the next lectures, use the **Autocomplete** facility in Visual Basic Editor to find interesting and potentially useful properties and methods for the main objects that we have covered so far: ‘ActiveCell’, and ‘Range’.
